

Applying helmet/FHR stickers

Covid-19

Helmet/FHR stickers

- This procedure has been produced to enable helmet stickers to be applied **safely** in accordance with current COVID-19 guidelines and procedures
- It is up to the individual whether they wear **gloves** or use **hand sanitiser** when performing this procedure
- These guidelines will be made available on the website

Step 1

Helmet sticker strips should be cut up into **individual stickers** and stored in a box. When issuing a sticker, the issuer should select a sticker using tweezers or long nose pliers

At NO point should the sticker be **touched** by hands, after 48hrs in the box they are considered uncontaminated

Step 2

The person bringing the helmet for stickering should hold the helmet in such a way that when the lining is pulled back, the **helmet Standard** and/or any other associated information labels can be seen.

On NO account should the scrutineer touch the helmet

Step 3

When the inspecting scrutineer is satisfied that the helmet is of a **current Standard**, they should carry out a visual inspection of the exterior to ensure there is no damage.

This can be achieved by requesting the helmet be orientated for a **complete inspection**

Step 4

When satisfied that the helmet is of a **valid Standard** and the **condition** is acceptable the issuing scrutineer can give the sticker, using tweezers, and indicate where it is to be affixed to the helmet.

This must be completed in the **scrutineer's presence**

Step 5

Payment and sanitisation

- The competitor should put the **correct fee** into a separate container
 - We advise not exchanging cash back to the competitor
- Leave the money for **48hrs**, to be considered uncontaminated
- **Hand sanitiser** should also be used **before** and **after** the procedure, as an additional precaution
